

# Video Phone & Softphone

**The ITS VoIP Video Phone** has revitalized video conferencing as a valuable business application, but now it's also proved that it's an affordable way for remote offices to stay in touch. With the ITS Video Phone, employees can see their counterparts in a remote office, managers can keep in touch with their employees, and executive staff members can stay connected regardless of where they are located.

As the demands of globalization, cost reduction, and productivity acceleration exert increasing pressure on business of all sizes and their employees, video phones and video conferencing become more important applications.

Ideal for Hosted IP PBX customers, our Video-VoIP platform from Grandstream supports plug and play video conferencing for business both small and large. The use of advanced telephony and multimedia technologies enables us to deliver the highest quality images and eliminate the break-up and distortion previously considered the videophone standard. We offer high quality, full-motion video and clear, delay free audio over any broadband internet connection.

Video conferencing over VoIP is more than just a great new feature, it's a window into VoIP's future, where VoIP offers remote interactive communications from any location, on any device, anywhere in the world!

**The ITS Softphone** feature turns any computer into a fully functional telephone. Using a headset or microphone and speaker, you can make and receive phone calls over the internet right from your computer.

Our Softphone is a Windows-based application that allows you to turn your computer into a VoIP device and serve as a globally mobile VoIP phone. Calls to your VoIP phone number will ring on your computer when the Softphone application is running, and you will be able to place calls whenever and wherever you have access to a broadband internet connection.
